1. Introduction

This reference guide describes the specifications, operating method and performance of the 1.6 kW 48 V Output Telecommunication Equipment Power Supply (this power supply). This power supply provides 1.6 kW power at the outputting DC 48 V. The AC input (90 to 264 V) is converted into 48 VDC through the semi-bridgeless PFC circuit and the isolated phase-shifted full-bridge (PSFB) circuit. This power supply contains an ORing circuit and can be used for the designing of a power supply that requires N+1 redundant operation. This power supply is designed to fit in a 1U rack shelf and is suitable for power supply applications of various sizes and purposes, including general-purpose 1U server power supplies. Incorporating Toshiba’s fast switching MOSFETs as switching devices, this power supply provides high efficiency.

2. Specification

2.1. Specification

Table 2.1 shows the input and output specification of this power supply.

3. Operating Procedure

This section describes the operating procedure of this power supply.

3.1. Connection with External Equipment

Fig. 3.3 shows the connections of this power supply with external equipment. The part enclosed by a solid red line is the external power connection terminal. Connect an AC plug to the AC inlet, and connect the AC plug to an AC stabilized power supply. The power supply, cables, lead wires, and connectors to be connected must meet the 2.1 Power Supply Specification. Connect the load unit using the 48 V output terminals that are surrounded by a solid blue line. Load units, cables, and connectors to be connected must satisfy 2.1 Power Supply Specifications. The areas marked with a red dashed line are the output voltage check terminals of the PFC and measurement terminals of 12 V voltage for primary-side control. The portions marked by the blue dashed line are measurement terminals of the 12 V voltage for secondary-side control.

Fig. 3.1  Terminals for External Equipment
3.2. Power-Up and Power-Off Procedure

Before starting this power supply, make sure voltage of the all terminals listed below are 0 V.
1. Terminals of 12 V for the primary side control (+) (-)
2. Terminals of 12 V for the secondary side control (+) (-)
3. PFC output terminal (+) TP44 (PFC_OUT)
4. PFC output terminal (-) TP45 (PN)
5. 48 V output terminal (+) (-)

After checking the above, connect to an AC stabilized power supply.
Disconnect the AC stabilized power supply when stopping.

3.3. Precautions for Evaluation (Electric Shock, Burn Injury, etc.)

Be careful of electric shock when connecting an AC stabilized power supply. Fig. 3.2 shows the primary and secondary sides of this power supply. Do not touch the primary side regardless of the supply of the primary 12 V power supply and the secondary 12 V power supply. Be very careful when observing the waveform. Even after this power supply is stopped, there is a risk of electric shock due to the remained charge of various capacitors. Check that the voltage of each part has decreased sufficiently, and then touch the board.

In addition, semiconductor devices, transformers and other components of this power supply generate heat according to the load current. The portions highlighted by red dashed lines in Fig. 3.3 dissipate much heat. Do not touch these areas while the power is on, as there is a risk of burn hazard.

Fig. 3.3 Components Subject to High Temperature
4. Performance

This section describes the efficiency of this power supply.

4.1. Efficiency

Fig. 4.1 shows the power supply efficiency measurement results of this power supply. The output voltage of the AC stabilized power supply is set to 115 V or 230V for measurement. The maximum output power at VinAC = 115 V is 800 W, and the maximum output power at VinAC = 230 V is 1.6 kW according to this power supply specification. The efficiency at the 100 % load is 92.3 % for 115 V input and 94.7 % for 230 V input, achieving high efficiency. Efficiency measurement at this time is performed with the cooling FAN driven by an external power supply. The measurement result changes when the cooling FAN is driven by the internal power supply. In addition, this power supply is equipped with ORing circuit at the output section. When ORing circuit is deleted, the power supply efficiency of this power supply will be improved.

![Efficiency Result](image)

**Fig. 4.1 Efficiency Result (Vin = 115 V, Vin = 230 V)**

For reference, Fig. 4.2 to Fig. 4.5 show the measured power-efficiency of this power supply and the standard of 80 PLUS. The 80 PLUS standards in the chart are as of March 2021. The specification value may be updated. Please check it every time. This power supply is not certified for 80 PLUS. It is necessary to measure the power supply efficiency using the equipment that will be the final product and acquire the certification.

Terms of Use

This terms of use is made between Toshiba Electronic Devices and Storage Corporation ("We") and customers who use documents and data that are consulted to design electronics applications on which our semiconductor devices are mounted ("this Reference Design"). Customers shall comply with this terms of use. Please note that it is assumed that customers agree to any and all this terms of use if customers download this Reference Design. We may, at its sole and exclusive discretion, change, alter, modify, add, and/or remove any part of this terms of use at any time without any prior notice. We may terminate this terms of use at any time and for any reason. Upon termination of this terms of use, customers shall destroy this Reference Design. In the event of any breach thereof by customers, customers shall destroy this Reference Design, and furnish us a written confirmation to prove such destruction.

1. Restrictions on usage
   1. This Reference Design is provided solely as reference data for designing electronics applications. Customers shall not use this Reference Design for any other purpose, including without limitation, verification of reliability.
   2. This Reference Design is for customer's own use and not for sale, lease or other transfer.
   3. Customers shall not use this Reference Design for evaluation in high or low temperature, high humidity, or high electromagnetic environments.
   4. This Reference Design shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable laws or regulations.

2. Limitations
   1. We reserve the right to make changes to this Reference Design without notice.
   2. This Reference Design should be treated as a reference only. We are not responsible for any incorrect or incomplete data and information.
   3. Semiconductor devices can malfunction or fail. When designing electronics applications by referring to this Reference Design, customers are responsible for complying with safety standards and for providing adequate designs and safeguards for their hardware, software and systems which minimize risk and avoid situations in which a malfunction or failure of semiconductor devices could cause loss of human life, bodily injury or damage to property, including data loss or corruption. Customers must also refer to and comply with the latest versions of all relevant our information, including without limitation, specifications, data sheets and application notes for semiconductor devices, as well as the precautions and conditions set forth in the "Semiconductor Reliability Handbook".
   4. When designing electronics applications by referring to this Reference Design, customers must evaluate the whole system adequately. Customers are solely responsible for all aspects of their own product design or applications. WE ASSUME NO LIABILITY FOR CUSTOMERS' PRODUCT DESIGN OR APPLICATIONS.
   5. No responsibility is assumed by us for any infringement of patents or any other intellectual property rights of third parties that may result from the use of this Reference Design. No license to any intellectual property right is granted by this terms of use, whether express or implied, by estoppel or otherwise.
   6. THIS REFERENCE DESIGN IS PROVIDED "AS IS". WE (a) ASSUME NO LIABILITY WHATSOEVER, INCLUDING WITHOUT LIMITATION, INDIRECT, CONSEQUENTIAL, SPECIAL, OR INCIDENTAL DAMAGES OR LOSS, INCLUDING WITHOUT LIMITATION, LOSS OF PROFITS, LOSS OF OPPORTUNITIES, BUSINESS INTERRUPTION AND LOSS OF DATA, AND (b) DISCLAIM ANY AND ALL EXPRESS OR IMPLIED WARRANTIES AND CONDITIONS RELATED TO THIS REFERENCE DESIGN, INCLUDING WARRANTIES OR CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, ACCURACY OF INFORMATION, OR NONINFRINGEMENT.

3. Export Control
   Customers shall not use or otherwise make available this Reference Design for any military purposes, including without limitation, for the design, development, use, stockpiling or manufacturing of nuclear, chemical, or biological weapons or missile technology products (mass destruction weapons). This Reference Design may be controlled under the applicable export laws and regulations including, without limitation, the Japanese Foreign Exchange and Foreign Trade Law and the U.S. Export Administration Regulations. Export and re-export of this Reference Design are strictly prohibited except in compliance with all applicable export laws and regulations.

4. Governing Laws
   This terms of use shall be governed and construed by laws of Japan.
