

DNF

1. Operation Outline

The port input by switch is detected via DNF, and the external interrupt (INT00) is generated.
The LED lights and lights out alternatively when the external interrupt is generated.

2. Each Setting

Switch : SW4 (PortA2)

LED : LED0 (PortJ0)

External interrupt : INT00 (PortA2)

3. Basic Operation

The LED lights and lights out alternatively when the PortA2 signal inputs.

4. Note

Multiple push-downs of a switch are not supported.
