

TLX9920

1. Applications

- Automotive
- MOSFET Gate Drivers

2. General

The TLX9920 is a photocoupler in an SO6L package that optically couples a photodiode array with an infrared light-emitting diode.

Each photodiode is connected in series, making it suitable for driving the gate of MOS devices.

This photocoupler incorporates a control circuit on the receiver side, eliminating the need for an external discharge resistor and improving switching speed.
